

Add Flows

- **This tutorial explains how to add flows between processes, stores and actors.**

Sequence of actions

- The green label describes the **first action** to do in the current screen capture. 
- The orange labels show the **following** actions. 
- The red label describes the **last action** in the sequence of actions. 

Add Flows

1. Click Tool

2. Click Origin

3. Click Target

Property	Value
Name	Refuse Access to...
Physical Name	
Alias	
UML Stereotype	
Numeric Identifier	4
Alphanumeric Identifier	
External	<input type="checkbox"/>
Synchronization Rule	
Fixed Time	

Click on the target object to complete the link creation. Click inside the drawing area to add Project project Local
